

# Migrating User Files to Spirit 2009

---

After installing Spirit 2009 using the default installation parameters, Spirit will install all program and data files according to the table below. This split installation is a requirement for Windows Vista, but not for Windows XP. If you are installing under Windows Vista, you may change the destination path for data files during the installation process if you want to.

OS	Program Files	Data Files
Windows XP	X:\Program Files\STI\SPIRIT2009	X:\Documents and Settings\All Users\Application Data\STI\SPIRIT2009
Windows Vista	X:\Program Files\STI\SPIRIT2009	X:\ProgramData\STI\SPIRIT2009

In order to view the data files after a default installation under Windows XP, you need to make sure that you can view the data folders. Here's how:

1. In Windows Explorer, select the Tools pull-down menu.
2. Select Folder Options...
3. Activate the View tab and make sure the setting for Hidden Files and Folders is set to "*Show hidden files and folders*"

If you would like to retain your custom default settings, such as line types, hatch patterns, keyboard macros and more from a previous version of Spirit, you will need to do the following:

1. Delete all files listed in the 120\_User Files folder in Spirit 2009
2. Copy the files listed in the table below from your previous version of Spirit (160\_Language Files folder) to the 120\_User Files folder in Spirit 2009.
3. Rename all copied files in the 120\_User Files folder to the names listed in the table below.

File Name - PRE SPIRIT 2009	Folder - PRE SPIRIT 2009	File Name - SPIRIT 2009	Folder - SPIRIT 2009
Spirit.ang	160_Language Files	Standard.ang	120_User Files
Spirit.art	160_Language Files	Standard.art	120_User Files
Spirit.lin	160_Language Files	Standard.lin	120_User Files
Spirit.mcr	160_Language Files	Standard.mcr	120_User Files
Spirit.dec	160_Language Files	Standard.dec	120_User Files
Spirit.dim	160_Language Files	Standard.dim	120_User Files
Spirit.dis	160_Language Files	Standard.dis	120_User Files
Spirit.pat	160_Language Files	Standard.pat	120_User Files
Default.sty	160_Language Files	Default.sty	120_User Files

4. Copy any additional hatch pattern (\*.pat) or line type (\*.lin) files to the 120\_User Files folder as well.
5. Custom color and pen palettes can be copied to the 040\_Palettes folder in Spirit 2009.
6. Custom component files can be copied to the 010\_ZAC Browser folder in Spirit 2009.
7. Custom layout files can be copied to the 020\_Layout folder in Spirit 2009.
8. Custom style files can be copied to the 021\_Styles folder in Spirit 2009.
9. Custom symbol files can be copied to the 030\_Symbol Files folder in Spirit 2009.
10. Custom Template files can be copied to the 031\_Templates folder in Spirit 2009.
11. Custom default drawings can be copied to the 050\_Default Files folder in Spirit 2009.
